Show Pig/Sow Herd Vaccine Protocol  
July 2015

This is a general outline of vaccines that I recommend. Each herd is different and you should consult with your veterinarian about a program that will work in your herd.

### **Sows**

1. **Flusure XP Whole herd every 3 months**
2. **Respisure One Whole herd every 3 months**
3. **Fostera PRRS Whole herd every 3 months**
4. **Farrowsure B Gold One dose at or right before weaning**
5. **Prosystem RCE Scour vaccine or Littergaud LTC 2 weeks pre farrowing unless they have never had this vaccine then it should be given 4 and 2 weeks pre farrowing.**
6. **Dectomax Injectable 5 days prior to farrowing**

### **Gilts Pre Breeding**

1. **Flusure XP Two doses two weeks apart**
2. **Farrowsure B Gold Two doses two weeks apart**
3. **Respisure Regular Two doses two weeks apart**
4. **Fostera PRRS One dose**
5. **Dectomax**

### **Gilts Pre Farrowing**

1. **Prosystem RCE or Littergaud LTC Two doses 4 and 2 weeks pre farrowing**
2. **Dectomax Injectable 5 days prior to farrowing**

### **Pigs at Processing**

1. **Iron Injection**
2. **Respisure One 2cc dose**
3. **Draxxin 0.1cc (25mg/ml)**
4. **Exceed 0.2cc**

## **Pigs at Weaning**

1. **Fostera PCV HM Repeat in 2 to 3 weeks**
2. **Flusure XP/ER Bac Plus Repeat in 2 to 3 weeks**
3. **Fostera PRRS One dose**
4. **Draxxin 0.2cc**
5. **Dectomax**

If your herd has specific disease conditions that exist then there are various medication that can be used to treat these. If there is a problem in your herd the best action to take is to call a veterinarian and have testing preformed to find out what the disease is and what medication and or vaccine can be used to treat the problem.
